**A Visionary Cyber Security Leader**

Blue Ridge Networks is a visionary cyber security leader that has pioneered proven network infrastructure, remote access, and endpoint cybersecurity solutions since the dawn of the Internet.

Our solutions are trusted by numerous **US agencies (Homeland Security and Pentagon)** and top companies when breaches are simply not an option. Our patented solutions create secure enclaves that isolate critical operations on networks and endpoints, essentially eliminating vulnerability to malicious cyberattacks.

**Prevent All Known and Unknown Attacks.**

AppGuard's policy enforcement engine prevents viruses, file less malware, botnets, polymorphic malware, weaponized documents, targeted attacks, in-memory attacks, ransomware, phishing, watering-holes, drive-by-downloads, and other undetectable advanced threats.

AppGuard doesn't rely on scanning known signatures or patterns to identify good from bad files. The AppGuard lightweight agent sits low at the kernel level and blocks unacceptable actions like code injection, or writing to the registry at the process level.

AppGuard solutions are deployed on some of the largest, most sensitive government, financial, critical infrastructure, and healthcare networks, protecting hundreds of thousands of users from targeted cyber-attacks and zero-day malware.

*“We’re simply more secure. In the 20 years of faithful service to our customers’ missions, there has been no reported breach of our solutions.”*
